

HIWAVE

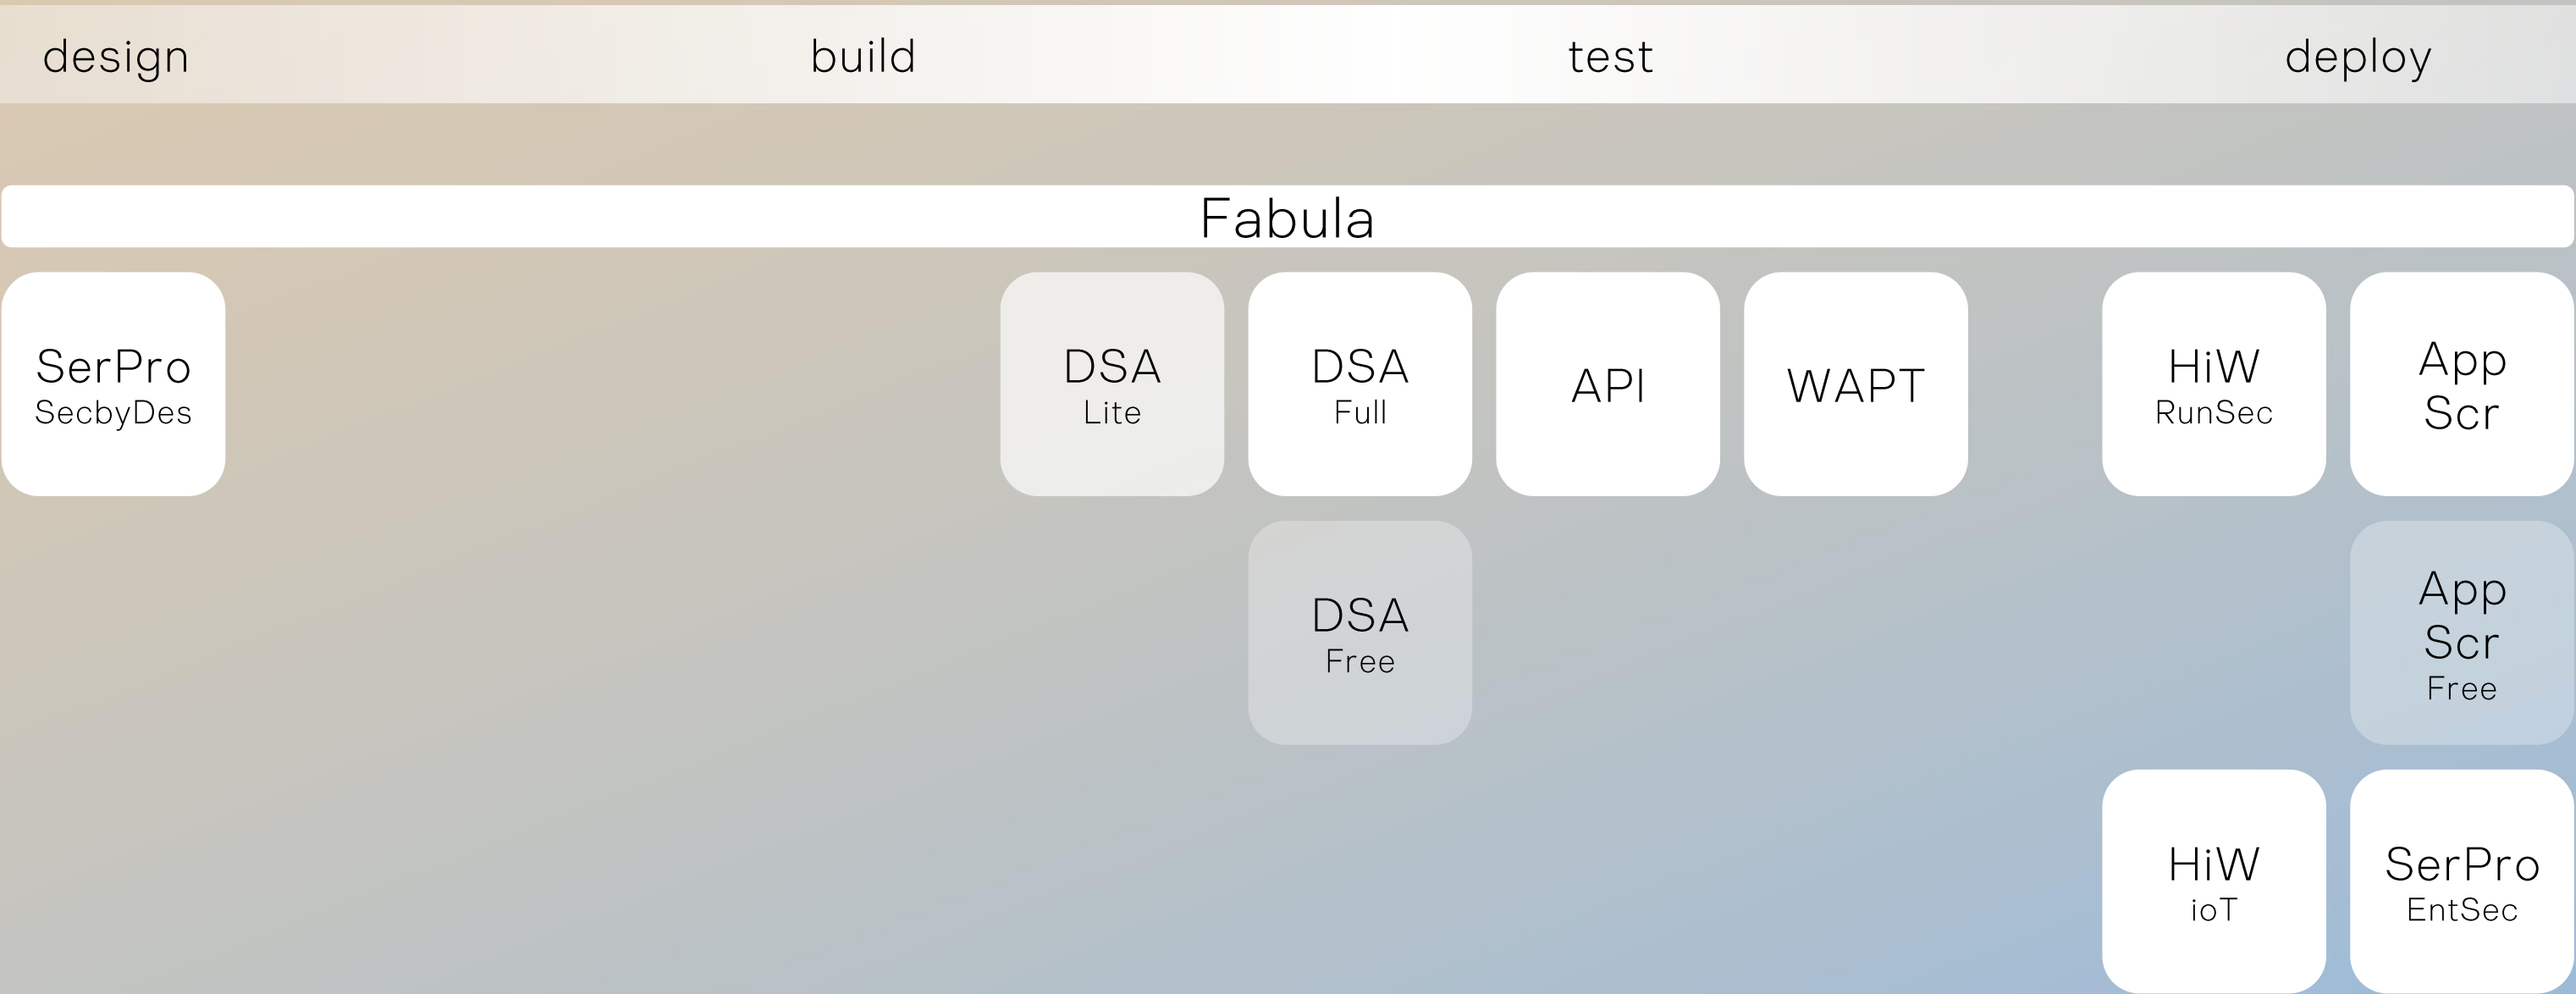

IOT

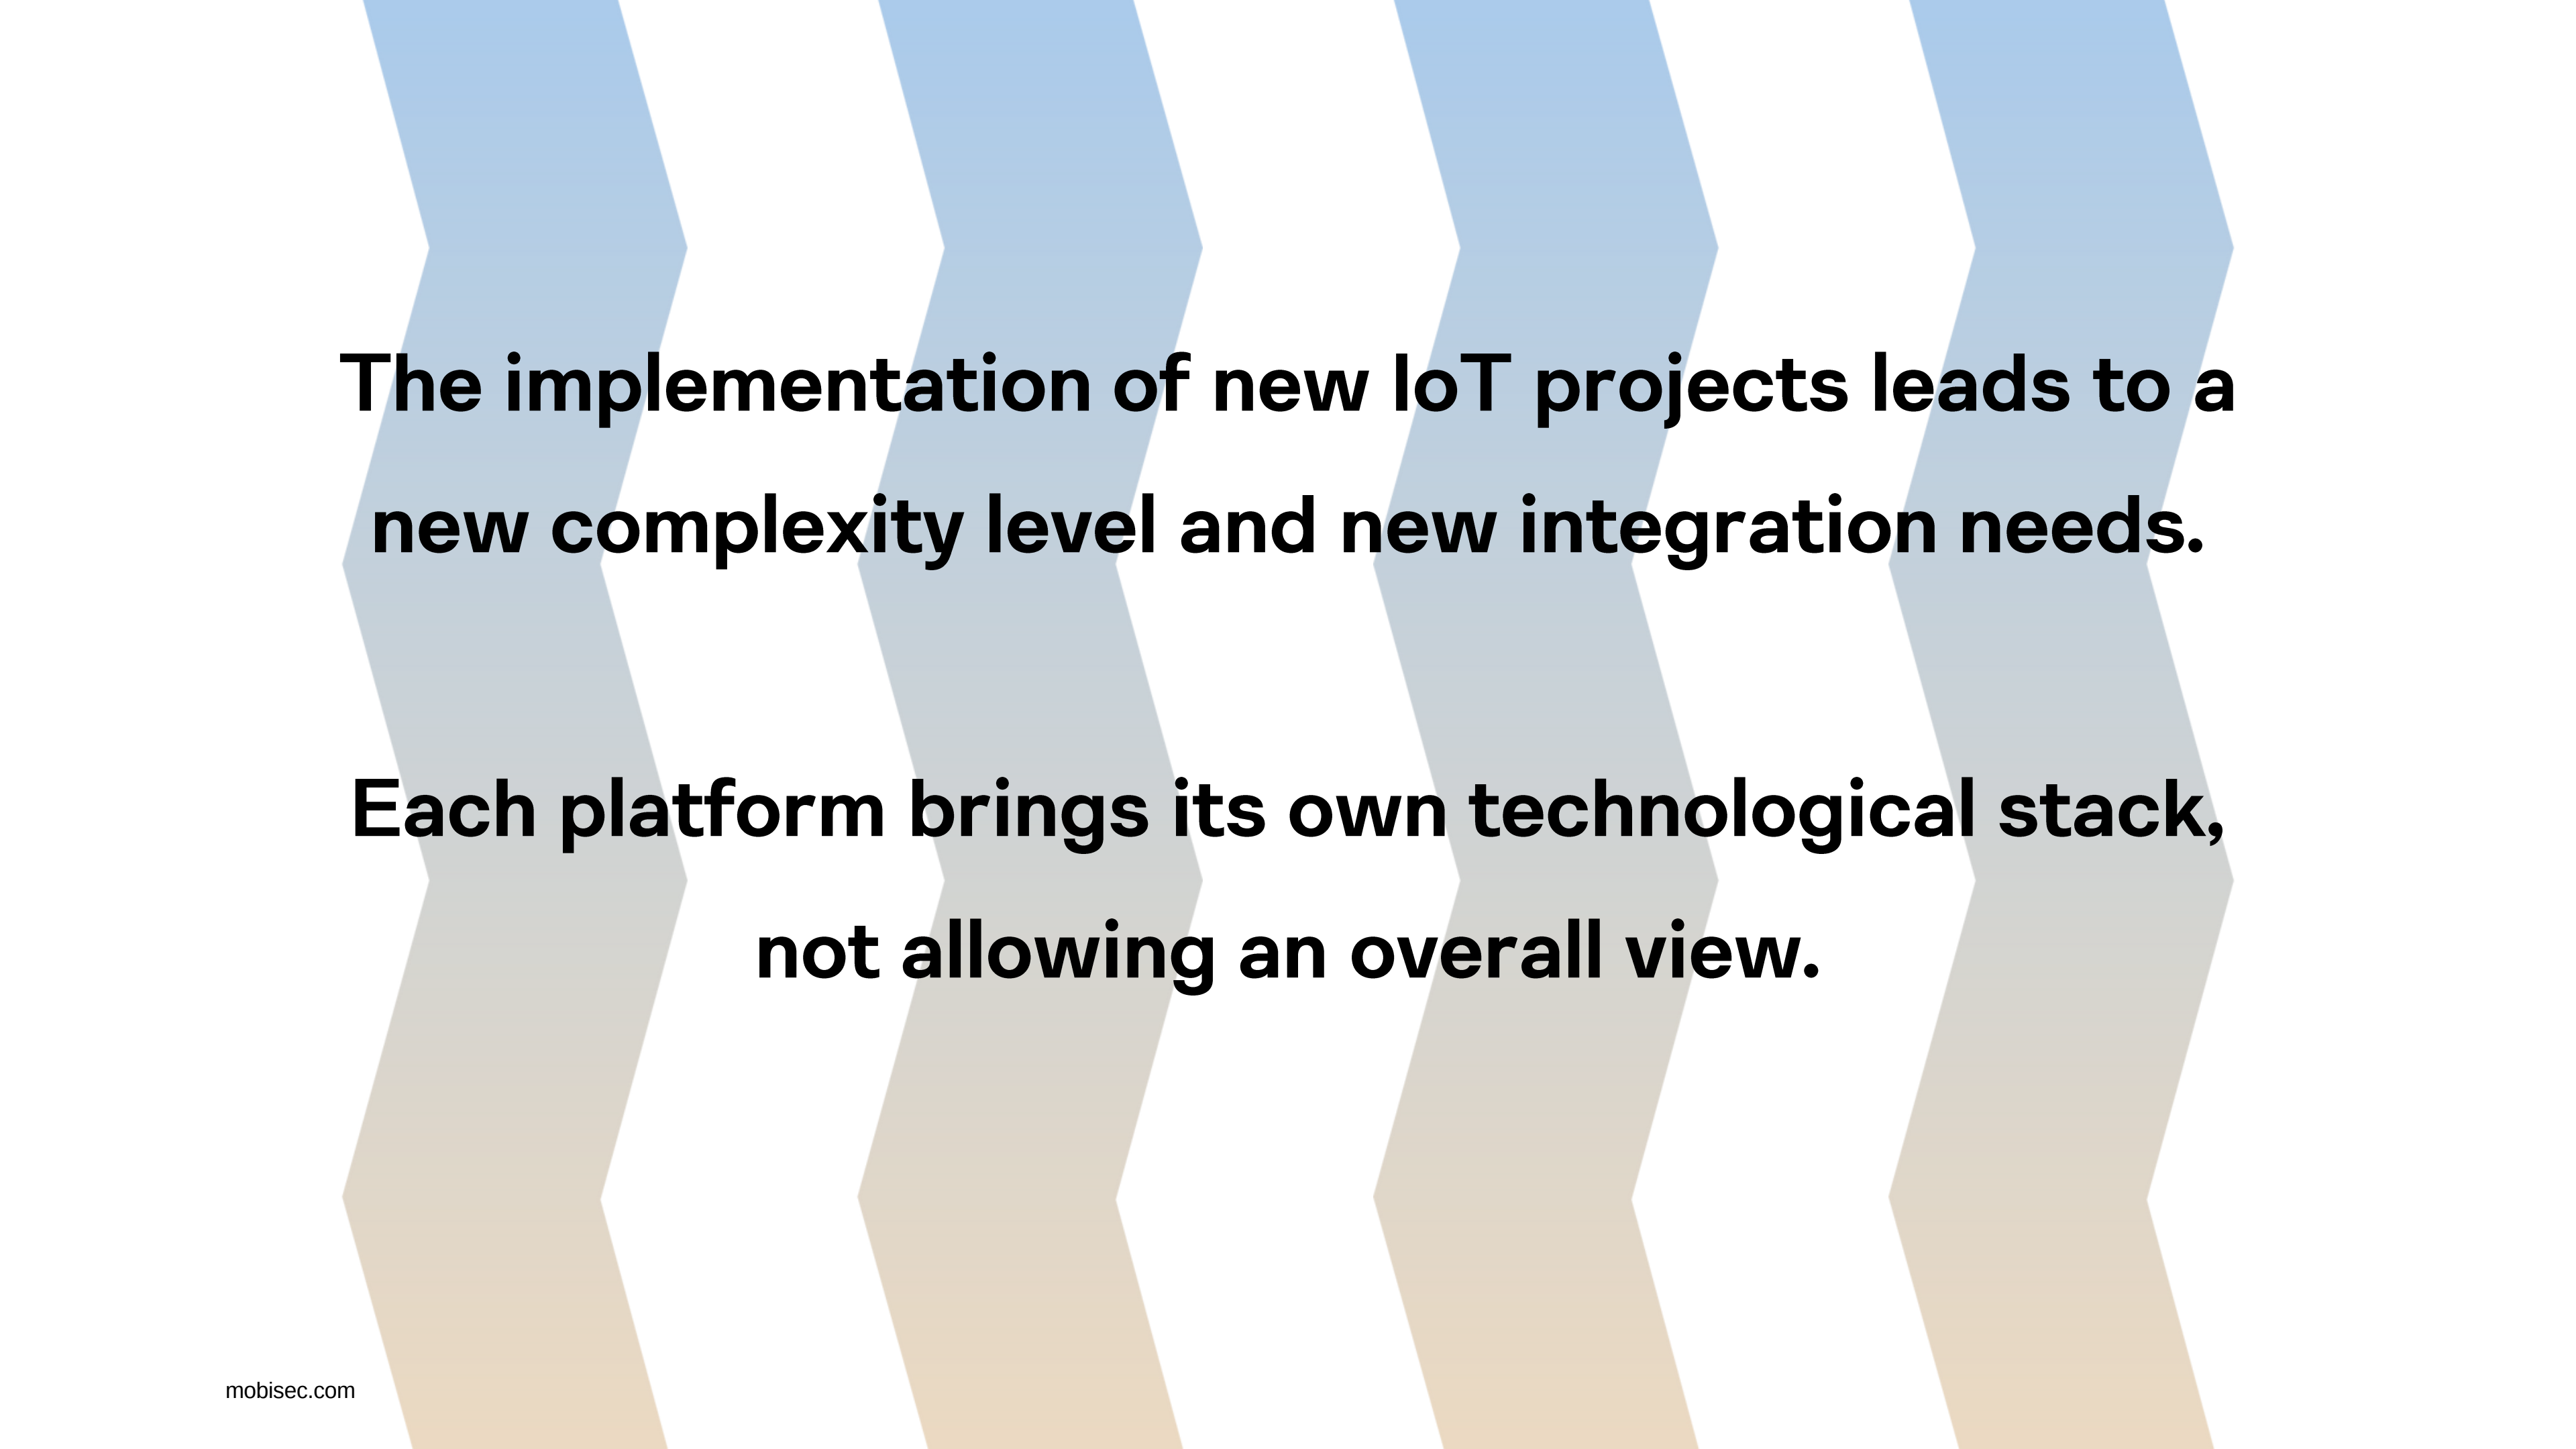

INTEGRATION

PLATFORM

Our solutions in the SDLC

mobisec

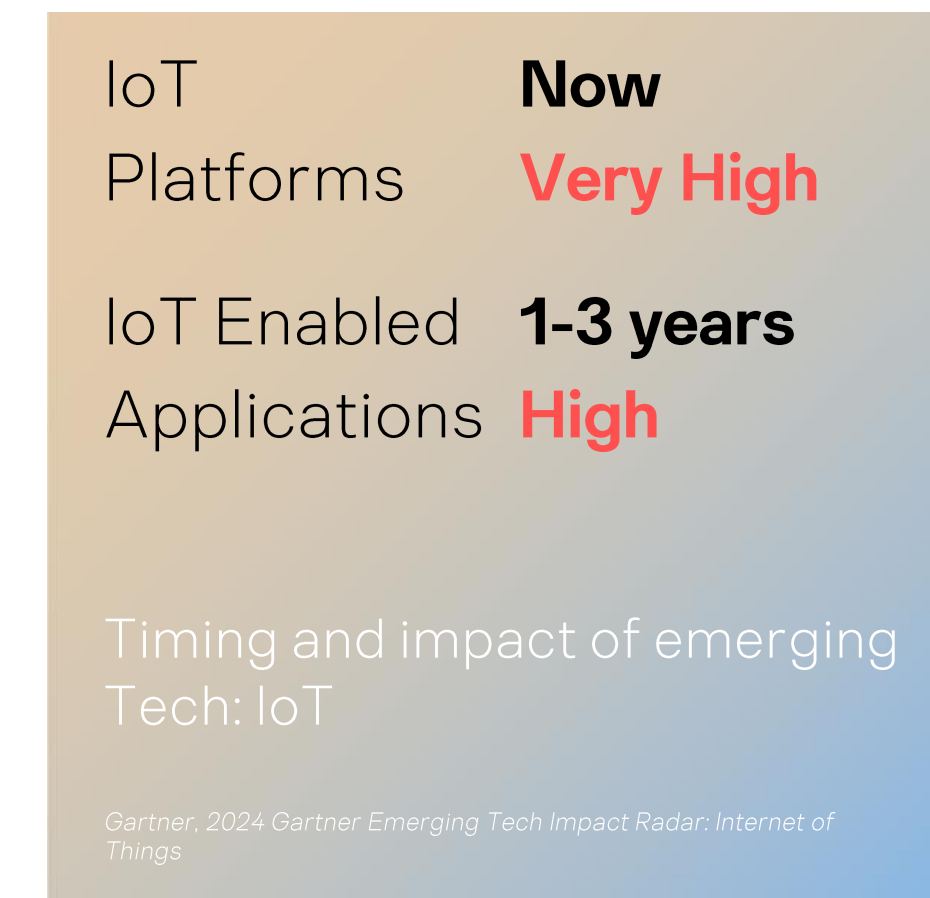

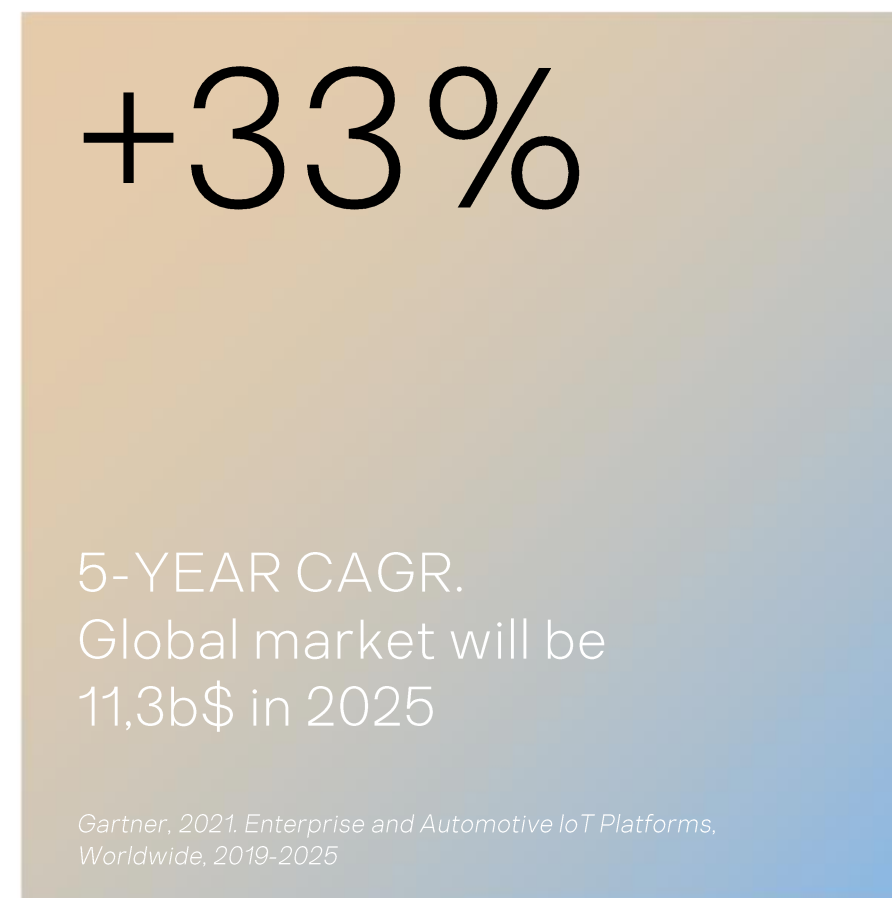

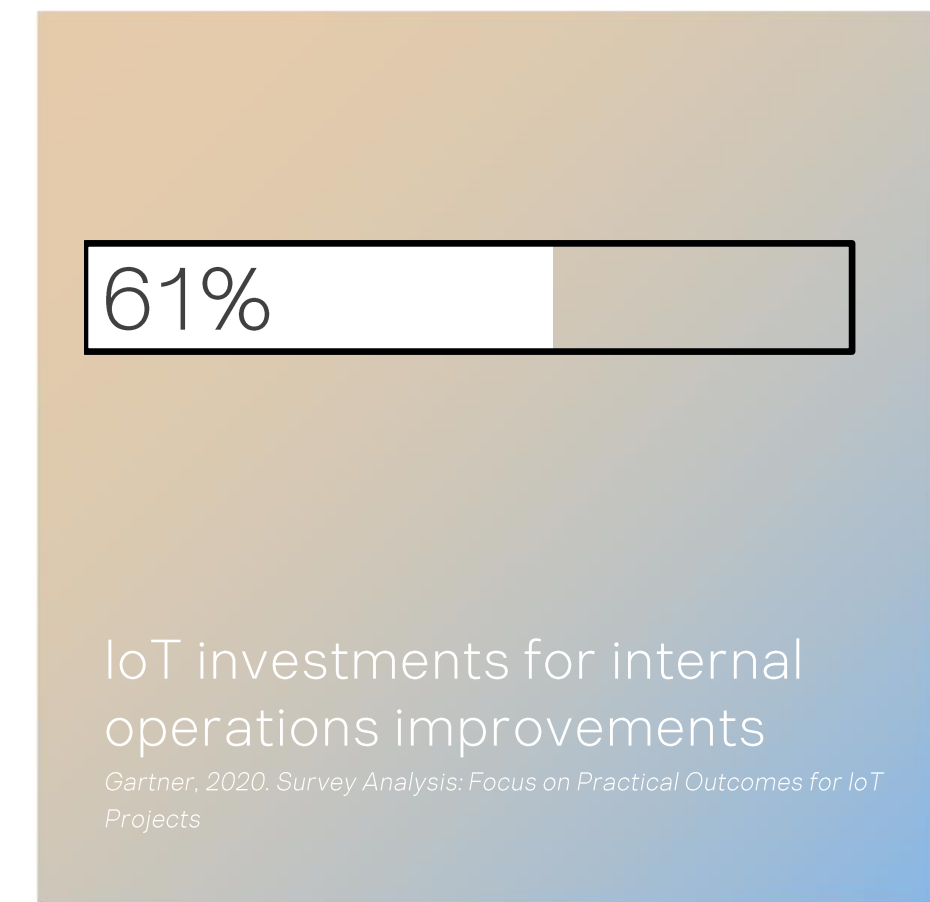

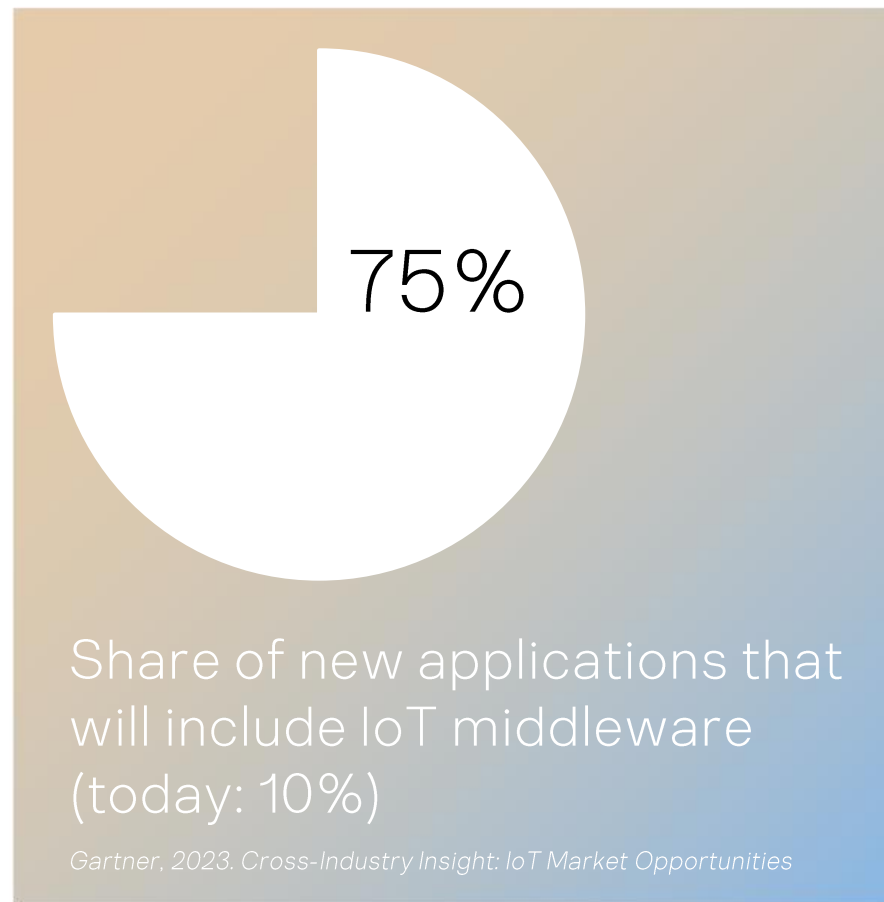

The implementation of new IoT projects leads to a new complexity level and new integration needs.

**Each platform brings its own technological stack,
not allowing an overall view.**

IoT is now

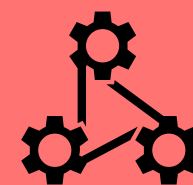

«Smart» objects, devices, intelligent endpoints are becoming every day more common. The challenge today is to gather data coming from different sources to allow faster, more efficient and conscious decisions.

Monitoring and
managing an
increasing
number of
devices

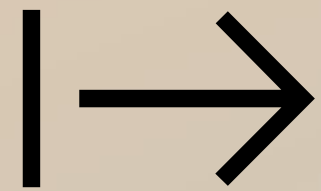

Interacting and
communicating
with devices
and softwares

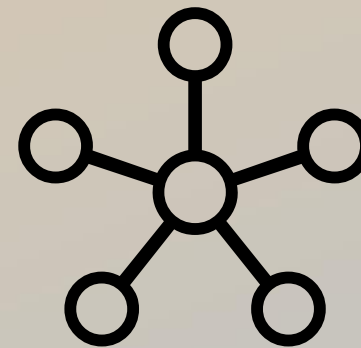

Thanks to Hiwave Integration Platform you can
control your assets from a single point.

Underlying magic

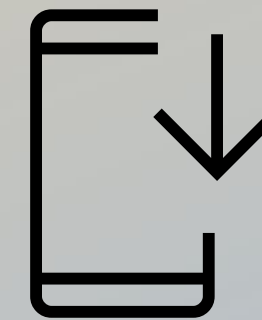

mobisec

Ready-to-use
platform

If it has APIs, we
can integrate it

App Mobile for
further

Environmental Monitoring

Success story: mining industry

mobisec

One of the top-10 companies in the mining industry in the world (copper and gold)

Over 5.000 devices on field, of different typologies, producing an unorganized and unused mass of data.

Thanks to HiWave they can

activate a Health&Safety management and access control system through smart badges and sensors;

track and monitor speed, location and health of the vehicles on the field;

enable geofencing and set danger zones to restrict access in certain areas/times;

interact and send alerts and notifications to the users (including white collars) thanks to the app on the smartphone.

Success story: insurance

mobisec

One of the top-3
insurance companies in
Europe

Agents deployed on the
field using hardware and
apps provided by the
company as only tool to
generate business

Thanks to HiWave
they can

**monitor the app's performance
to provide feedbacks to the
development team;**

**cross-reference statistics from
both hardware and software;**

**get advanced data related to
hardware's health and security-
related issues;**

**gather data from the device and
from the app even when offline.**

Success story: smart city

mobisec

500k+ inhabitants
municipality

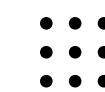

HVAC and renewable
energy production sites
to be optimized;
monitoring and
management of smart
mobility solutions.

Thanks to HiWave
they can

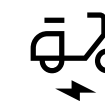

**realize the data warehouse
infrastructure to nurture ML
models for predictive
maintenance;**

**map all assets and interact with
them from a single point;**

**monitor maintenance processes
and facilitate on field activities;**

**collect relevant data from the
fleet of vehicles.**
